Safety First

1. Never plug device in near water. (Machines aren't waterproof and this can cause severe bodily damage.)

2. Don't plug in a damaged (ripped, torn, broken) cord to a device.

3. When you unplug the device, don't unplug by pulling on the cord; hold on gently to the plug and pull it out of the outlet.

4. Don't let your best friends (pets) use cord as a chew toy. ☺

5. Don't touch your home's fuse box.

6. Never put anything besides a plug into an outlet.

7. Don't overload an outlet – limit the number of things that are plugged into each one.

8. Never use a plug that is damaged. Look for bent or broken prongs.

9. Never place heavy objects on top of electrical cords.

10. If in doubt ask an adult for help, or if in an emergency (fire, you or someone else is hurt) call 911 immediately.
